

QC Concrete Tracker

Concrete QC records without turnover chaos: pour cards, truck tickets, cylinder breaks, missing documents, action items, NCRs, reports, and turnover prep in one hosted workflow.

What it controls

Field ticket capture

Phone workflow for planned loads, ticket entry, sample trucks, rejected loads, quantities, and attachments.

Office registers

Dashboard, Delivery Ticket Register, Pour Cards, Break Register, Action Items, NCRs, and Project Summary.

Turnover prep

By-pour and by-area package checks for tickets, break reports, drawings, NCRs, and dispositions.

How to sell it

Best buyers

Concrete QC managers, CMT labs, self-performing contractors, and project teams preparing closeout records.

Pilot offer

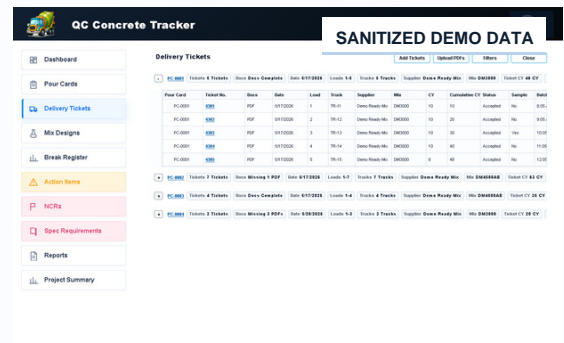

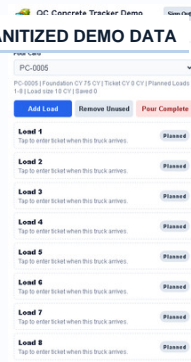

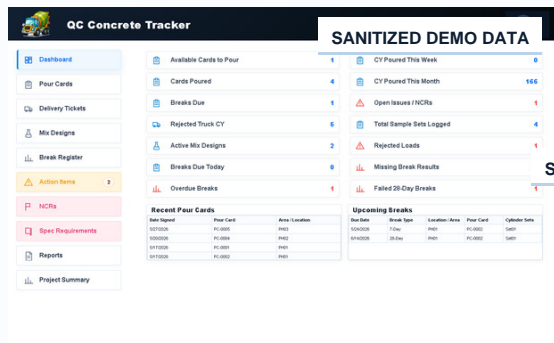

Sanitized demo walkthrough first, then a limited live project only after written terms are accepted.

Demo separation

The public demo uses sanitized demo-only sample data. Production, demo, and customer D1/R2 storage are separate.

Protection posture

Private source repo, hosted access only, copyright notice, written customer terms, and no source-code access.
